1.0 INTRODUCTION

This is the sixth edition of the List of Construction Projects. As an expansion of the previous List of Industrial Projects, the publication includes information on industrial as well as commercial, recreational, and institutional facility constructions and expansions. The List of Construction Projects is published semi-annually by the Department of Economic Development as part of its program to provide information on the level and direction of economic activity in Alberta.

This report is based largely on a survey carried out between January 5th, 1981 and January 26, 1981 with final printed copies being made available to Alberta Economic Development by January 31st, 1981. The work was carried out by deHaas and Associates Ltd. Any errors in this report are our responsibility. In particular we regret the fact that pagination was omitted from the report. We would appreciate receiving corrections on data pertaining to your company. Please write to: deHaas and Associates Ltd., 1020 - 10303 Jasper Avenue, Edmonton, Alberta, T5J 3N6.

While every effort has been made to ensure that the listing is as complete and accurate as possible, the Department of Economic Development does not accept responsibility for errors or omissions nor does it wish to convey the impression that the lists represent in any way an official or approved list of projects. Furthermore, as this publication is based on anticipated projections only, neither the persons who have prepared this study nor Her Majesty the Queen in Right of Alberta accept any responsibility for the consequences of reliance upon it.

For further inquiries on definitions, methodology, or information on any specific project, contact:

This issue of the List of Construction Projects covers the period June 30, 1980 to December 31st, 1980 and represents data collected for a total of 666 industrial projects and 2145 commercial projects. The total value for all projects considered is almost 85 billion dollars.

Response rates have been a problem with the survey from which this document derives. At present we think that roughly 60% of eligible projects are covered but this includes almost 95% of projects over $200 million.

2.0 METHODOLOGY

2.1 Data Collection

Most of the data for the list was obtained by telephone interviews, but those who had many projects or did not wish to give information over the telephone were sent questionnaires. Original sources of information were compiled from newspaper clippings, magazines such as "Oilweek", the previous investment projects list, as well as provincial and municipal government records.

2.2 Project Classification

The following definition was used as criteria for gathering the data: A Construction Project is:

a) An expansion of already existing industrial or commercial facilities.

b) The construction of new industrial or commercial plants and/or related infrastructures except roads and single family residences.

Only commercial projects involving a capital expenditure of $500,000 or more were included in the list, and only the industrial projects involving a $100,000 capital expenditure or more were included. Where possible land costs were excluded.

Projects were classified as commercial or industrial according to the following schema:

Commercial, Recreational and Institutional

- Apartments - includes senior citizen residences
- Row Housing
- Office and renting space - includes professional buildings
- Warehousing
- Shopping Centres and retail outlets
- Accommodation
- Recreational facilities - sports arenas, swimming pools, exhibition grounds, ice arenas, curling rinks, and museums
- Parks
- Educational facilities
- Health related facilities
- Government buildings and grounds (federal, provincial, municipal)
- Other services - youth centres, centres for handicapped, convention centres, churches, libraries
- Municipal engineering, water treatment, sewage treatment and pipes, firehalls
- Equipment storage and maintenance.

Industrial

- Agricultural processing
- Forestry
- Other manufacturing
- Mining
- Petroleum and petrochemicals
- Utilities
- Transportation
- Grain Handling

Status of a project was designated as proposed, under construction, or completed according to the following:

1) Proposed - The project was publicly announced before December 31, 1980 but was not yet under construction. Projects under consideration are also included. Some of these projects may be competitive proposals by various companies or they may be delayed or cancelled due to unforeseen circumstances. Not all projects are likely to go ahead.

2) Under construction - The project was either in the site preparation stage or on-site construction was underway by December 31, 1980.

3) Completed - The project was completed between June 30, 1980 and December 31, 1980 and is now in the operations phase.

2.3 Location

Generally the name of the nearest town or village is given for project location. It should be noted, however, that census division zero is used where the project location is undecided or extends over more than one census division. Examples for this case include pipelines, transmission lines, and a proposed vocational center.

2.4 Measurement of Jobs Created

It is important to note that the projection of the number of jobs expected to be created by projects in the commercial categories such as office buildings, warehouses and government buildings presents some difficulties. The number of permanent jobs created is primarily dependent on the new tenants of the building. As the company constructing the building is rarely the tenant of the building, they are not in the position to estimate new jobs housed in the project. Many respondents, furthermore, refused to deal with manpower related questions.

3.0 HIGHLIGHTS

The highlights of this report are shown in a series of tables and graphs produced below. In general these are self explanatory except that it is important to note that these data include confidential information and values given are therefore generally larger than those found in the detailed tables included in section four. Confidential projects listings are, furthermore, not shown in section five.

The purpose of the barcharts is simply to provide some idea of the relationship between this issue of the List of Construction Projects and previous issues. The pie charts, on the other hand, provide a pictorial representation of the detailed data to be found in tables 3.1 and 3.2 below.

Table 3.1 General Summary

	Number of New Jobs to be Created		Value in Millions of Current Dollars		Number of Projects Listed	
	Industrial	Commercial	Industrial	Commercial	Industrial	Commercial
Completed	1531	3435	1275	1538	213	462
